Understanding Plant Factories and Indoor Vertical Farming

What Is a Plant Factory?

A plant factory is an indoor, fully controlled agricultural environment designed to optimize plant growth and maximize productivity. These facilities typically incorporate advanced technologies such as artificial lighting, climate control, nutrient delivery, and automation systems. The primary goal is to produce high-quality crops efficiently, regardless of external weather conditions or seasonal variations.

What Is Indoor Vertical Farming?

Indoor vertical farming is a subset of plant factories where crops are grown in vertically stacked layers within enclosed environments. By utilizing vertical space, these farms significantly increase land-use efficiency, making it possible to grow large quantities of food within limited areas—ideal for urban settings. When integrated into plant factories, vertical farming becomes a powerful method to produce fresh produce close to consumers, reducing transportation emissions and costs.
