Introduction to the Masoneilan Camflex II Manual

The Masoneilan Camflex II Manual control valve is a classic industrial valve designed for throttling and regulating flow in various process systems. Manufactured by Baker Hughes, a leader in control technology, the Camflex II series emphasizes simplicity, reliability, and versatility. Its manual operation offers a straightforward approach for applications where automatic or remote control is unnecessary or impractical. The Camflex II's

design incorporates a robust body, a flexible cage, and a unique cam-and-lever mechanism that ensures accurate flow control. Its manual operation allows for precise adjustments, making it ideal for applications that require fine-tuning or where automation is not justified.

Design and Construction

Body and Bonnet

The body of the Camflex II is constructed from high-quality materials such as carbon steel, stainless steel, or other alloys suited to handle specific process fluids and pressures. The robust construction ensures longevity and resistance to corrosion or mechanical stress. The bonnet provides a sealed environment for the internal components, facilitating maintenance and inspection without compromising process integrity. The design allows for easy access to internal parts, making manual adjustments and repairs straightforward.

Flow Control Element
