Basic Characteristics of Bacteria

Bacteria are microscopic, single-celled organisms that are found virtually everywhere on Earth. Their simplicity and adaptability have made them some of the most successful life forms on the planet. When studying bacteria, it is crucial to understand their fundamental characteristics that distinguish them from other microorganisms such as fungi, viruses, or protozoa.

1. Cellular Structure

2. **Cell Wall:** Most bacteria possess a rigid cell wall made of peptidoglycan, which provides shape and protection.
3. **Cell Membrane:** Beneath the cell wall, bacteria have a plasma membrane that controls what enters and exits the cell.
4. **Internal Structures:** Bacteria generally lack membrane-bound organelles like mitochondria or chloroplasts, but may contain structures such as ribosomes and inclusion bodies.

2. Shape and Size

1. **Common Shapes:** Bacteria come in various shapes, primarily cocci (spherical), bacilli (rod-shaped), and spirilla (spiral-shaped).
2. **Size Range:** Typically, bacteria are between 0.2 to 2 micrometers in diameter, making them visible only under a microscope.

Identifying Bacteria: Characteristics Used in Worksheets

Educational worksheets often include activities where students learn to identify bacteria based on specific traits.

1. Morphological Features

1. Shape, size, and arrangement (e.g., chains, clusters).
2. Presence or absence of flagella for movement.
