Key Concepts in Parallel Programming

Understanding the following concepts is crucial:

- **Concurrency vs. Parallelism:** Concurrency involves managing multiple tasks that make progress over time, while parallelism executes tasks simultaneously.
- **Threads and Processes:** Basic units of execution, with threads sharing memory and processes having separate memory spaces.
- **Synchronization:** Coordinating tasks to prevent conflicts, often using locks, semaphores, or barriers.
- **Data Parallelism:** Distributing data across multiple processors to perform the same operation concurrently.
- **Task Parallelism:** Distributing different tasks across processors.
